Events in the cyberspace can be modeled as a spatiotemporal continuity populated by computing devices, communication channels, and multimodal interactions. Contemporary ubiquitous devices unleash the boundary of one-to-one human-computer interaction. E.g., it has become a de facto style of facilitating social events that participants use several distributed devices through multimodal interaction. How people access multimodal media in different context is an interesting yet challenging problem. Ubi-media Computing, as it is bravely defined, brings together technologies for location/context adaptation, inter-device interaction/reaction, and media/data communication.

In line with the blooming technologies realizing the above concepts, this international conference looks at the state-of-the-art and original research issues to be published in the proceedings. New contributions include three perspectives: devices that realize ubiquitous computing, multimodal interactions between human and these ubiquitous devices, and the need of adaptive multimedia.

The conference proceedings will be published by IEEE, with best papers recommended for publication in special issues of international journals. Topics of interests include but not limit to the following:

- UbI-Media Infrastructure/Systems
  - Wireless and mobile networking for ubiquitous multimedia
  - Mobility computing systems, Peer-to-peer networking
  - Network architectures, protocols, and algorithms
  - Ad hoc and sensor network, Cross-layer design
  - Advanced communication techniques, Smart objects
  - Cognitive computing in Ubi-Media Systems
- UbI-Media Middleware & Tools
  - Adaptive, automatic and context-aware computing
  - Cross-network media server, Computational intelligences
  - Semantic web and knowledge grid, Content protection
  - Privacy & security in ubiquitous environments
  - Agent technologies, Human-computer interaction
- UbI-Media Services and Management
  - Programming models for Ubi-Media, Knowledge representation and ontology
- UbI-Media Applications
  - UbI-media for education / commerce, Ubi-media for entertainment / games
  - UbI-media for medical / health care, Ubi-media for smart home / smart city
  - UbI-media for citizens and E-government, Ubi-media for intelligent mobility
  - UbI-media for environmental protection, Ubi-media for public safety and security
- Innovative Ubi-Media applications

**Important Dates**

- **Paper Submission:** March 1st, 2018 – April 28th, 2018
- **Final Manuscript Due:** May 16th, 2018 – May 25th, 2018
- **Author Notification:** April 15th, 2018 – May 15th, 2018
- **Early Registration Due:** June 1st, 2018

**Manuscript Format**

Do not exceed 6 single-space double column, 8.5 x 11-inch pages (including figures, tables and references) in 11 point Times Roman or similar font. Number each page. Include an abstract, five to ten keywords, the technical area(s) most relevant to your paper, and the corresponding author’s e-mail address. Submissions should represent original, substantive research results. We will not accept any paper which, at the time of submission, is under review for or has already been published (or accepted) for publication in another conference or journal.

**Submission Details**

Submitted papers will be carefully evaluated based on originality, significance, technical soundness, and clarity of exposition. All papers will be refereed by at least two members of the program committee. All submitted papers MUST be formatted according to the author guidelines provided by IEEE Computer Society Press (two-column format) and MUST NOT be longer than SIX pages.
